

NONO-TFE3 Fusion/Translocation FISH Probe Kit

Introduction

The NONO-TFE3 Fusion/Translocation FISH Probe Kit is designed to detect rearrangements involving the human NONO and TFE3 genes, located on chromosome bands Xq13.1 and Xp11.23, respectively. Rearrangements between the two genes, the NONO gene – also called NMT55, NRB54, P54, P54NRB or PPP1R114 – and the TFE3 gene – also known as TFEA, RCCP2, RCCX1 or bHLHe33, have been observed in renal cell carcinoma subtypes and other tumor malignancies.

Intended Use

To detect rearrangements involving the human *NONO* and *TFE3* genes located on chromosome bands Xq13.1 and Xp11.23, respectively.

Probe Design

Not to Scale

LSP NONO FISH Probe covers the entire *NONO* gene along with some upstream (5' end) sequences. LSP TFE3 3' FISH Probe covers genomic sequences adjacent to the 3' portion of the *TFE3* gene. The probe set is optimized to reveal translocations between the two gene regions.
