

TMPRSS2-ETV4 Fusion/Translocation FISH Probe Kit

Introduction

The TMPRSS2-ETV4 Fusion/Translocation FISH Probe Kit is designed to detect rearrangements involving the human TMPRSS2 and ETV4 genes, located on chromosome bands 21q22.3 and 17q21.31, respectively. Rearrangements between the two genes have been observed in prostate cancer and other malignancies.

Intended Use

To detect rearrangements involving the human *TMPRSS2* and *ETV4* genes located on chromosome bands 21q22.3 and 17q21.31, respectively.

Cont.

Color

LSP TMPRSS2 5' FISH Probe
LSP ETV4 3' FISH Probe

CytoGreen
CytoOrange

Probe Design

LSP TMPRSS2 5' FISH Probe covers the entire *TMPRSS2* gene along with some upstream (5') and downstream (3') sequences; the probe overlaps the known major and minor breakpoints observed in the region. LSP ETV4 3' FISH Probe covers the entire *ETV4* gene and the sequences downstream of 3' end of the gene. The probe set is optimized to reveal translocations between the two genes.

Cat. No.

Volume

CT-PAC178-10-GO

10 Tests (100 µL)

Signal Pattern Interpretation

Normal Patterns

2O2G*

Abnormal Patterns

Other Patterns

*Overlapping orange and green signals can appear as yellow.
