

GLI1/CCP12 FISH Probe Kit

Introduction

The GLI1/CCP12 FISH Probe Kit is designed to detect the human GLI1 gene located on chromosome band 12q13.3, along with the number of chromosome 12 copies per cell. The GLI1 gene – also called GLI – is an oncogene that is expressed and sometimes amplified in several human cancers.

Intended Use

To measure the copy number of the human *GLI1* gene located on chromosome band 12q13.3.

Probe Design

Not to Scale

LSP GLI1 FISH Probe covers a chromosomal region which includes the entire *GLI1* gene. CCP12 FISH Probe, derived from chromosome 12-specific alpha satellite DNA, is designed to serve as a control to determine the number of chromosome 12 copies per cell.
