

PAX7 Break Apart FISH Probe Kit

Introduction

The PAX7 Break Apart FISH Probe Kit is designed to detect rearrangements in the human PAX7 gene located on chromosome band 1p36.13. In addition to revealing breaks, which can lead to translocation of parts of the gene, inversion, or its fusion to other genes, the probe set can also be used to identify other PAX7 aberrations such as deletions or amplifications. Rearrangements and abnormal expression of the PAX7 gene – also known as HUP1, RMS2 or PAX7B – have been observed in alveolar rhabdomyosarcoma (ARMS) and other tumor types and conditions.

Intended Use

To detect rearrangements in the human *PAX7* gene located on chromosome band 1p36.13.

Probe Design

Not to Scale

LSP PAX7 5' FISH Probe covers some genomic sequences adjacent to the 5' end of the *PAX7* gene. LSP PAX7 3' FISH Probe covers some sequence downstream of the 3' end of the gene. The two probes are flanking an area across the *PAX7* gene in which variable breakpoints have been observed.

Cat. No.

Volume

CT-PAC088-10-GO

10 Tests (100 µL)
