

CCP6 FISH Probe

Introduction

Chromosome counting probe 6 (CCP6) FISH Probe is designed to detect the copy number of chromosome 6 or to serve as a control to determine the relative number of copies of genes located on chromosome 6 or other chromosomes. The probe is derived from chromosome 6 specific alpha satellite DNA.

Intended Use
To measure the copy number of the human chromosome 6.

Probe Design

The CCP6 probe hybridizes to chromosome 6 in both metaphase and interphase cells. After hybridizing with normal human peripheral blood lymphocyte samples, two distinct bright fluorescent spots could be observed in the interphase nuclei under a fluorescence microscope. In metaphase cells, bright signals can be observed on the centromere region of chromosome 6 (6p11.1-q11.1). No cross-hybridization to loci on other chromosomes is observed.

Not to Scale

Cat. No.	Volume
CT-CCP006-10-G	10 Tests (100 µL)
